

Job Title: Junior Data Scientist - AI & ML

Location: Bangalore, India

We are looking for a passionate Junior Data Scientist to join our AI & ML team to help build, deploy, and optimize machine learning models for real-world business problems.

Responsibilities:

- Perform exploratory data analysis (EDA) on structured and unstructured datasets.
- Build and deploy Machine Learning models using Python and popular libraries like scikit-learn, TensorFlow, and PyTorch.
- Work on Natural Language Processing (NLP) tasks including text classification, sentiment analysis, and topic modeling.
- Develop data pipelines using Pandas, NumPy, and SQL for data preprocessing.
- Collaborate with cross-functional teams to deploy models using Flask or FastAPI.
- Utilize Power BI for visualization and presenting findings to stakeholders.
- Version control your work using Git and GitHub.

Required Skills:

- Strong programming skills in Python and familiarity with C++ or Java.
- Experience with Machine Learning and Deep Learning algorithms.
- Hands-on experience with TensorFlow, Keras, or PyTorch.
- Knowledge of Natural Language Processing (NLP) techniques.
- Strong analytical skills and ability to visualize data using Power BI or similar tools.
- Familiarity with cloud platforms (AWS/GCP) is a plus.

Education:

- Bachelor's degree in Computer Science, Data Science, AI, or a related field.

If you are excited about using data to drive business decisions and want to work on cutting-edge AI/ML projects, we would love to hear from you.
